STIWA Group: Successful start to battery production

STIWA Group is commencing the new 2024/25 financial year with a significant milestone: the Upper Austrian high-tech company has secured key projects in battery cell production. These decisions pave the way for the coming years and align with the Group's strategic objective of becoming a crucial partner in battery cell production.

STIWA Advanced Products has received its first nomination for components from an international battery cell manufacturer. This achievement provides a solid foundation for expanding the components business in this market segment. Equally noteworthy is the nomination of STIWA Automation for assembly systems in battery cell production.

“The project decisions affirm our commitment to becoming a global player and an essential partner in battery production. I extend my congratulations to the teams at STIWA Automation and STIWA Advanced Products for this success,” says Peter Sticht, CEO of the STIWA Group.

Promising Opportunities Across Various Market Segments

Beyond battery cells, STIWA has also invested in future-oriented topics such as e-motors and hydrogen within the New Mobility sector. These areas offer significant potential for STIWA's growth.

About STIWA Group

The STIWA Group is an internationally operating specialist in the field of automation with the headquarter in Attnang-Puchheim and counts well-known customers like Blum, thyssenkrupp Presta, VW, Bosch and Greiner Bio-One to its customers.
